Beginners can also get started with free images from Adobe Stock, which offer high-quality, royalty-free stock photos and graphics for a low cost. 1. Adobe Photoshop. If you're a software developer, you can often snag a copy of Photoshop for free. It's quite often a preinstalled program, but even if it isn't, you can sometimes download it from Adobe.com, after signing up. For any beginners out there, the free trial, which you can get through any retail outlet, is a great way to try out Photoshop. You can download and even start using Photoshop without having to worry about losing your investment in the software. 2. Dreamweaver. If you're a web developer, Dreamweaver can make you a web design pro. This program, available for Windows, Mac and Linux, allows you to design a page online or create a layout, then upload and publish it to the web. Dreamweaver gives you complete control over your site's appearance, layout and design. It makes it simple to create and edit rich-media websites such as Flash animations and video, but does require some knowledge of HTML for more advanced users. It's also important to note that Dreamweaver isn't the best way to host any kind of a website, since you'll want to look at other options, such as a managed hosting or cloud-based server. Dreamweaver is free for up to 20 pages or 10 hours of use on 1GHz or faster machines. For more details, click here. 3. QuarkXPress. If you're a graphic designer, QuarkXPress is a great choice for most. This program is similar to Adobe Illustrator and Photoshop in function and layout, and it can run on both Windows and Mac computers. But it focuses more on vector images, such as digital fonts and illustrations, than raster images, which are typically produced by a scanner. Unlike Illustrator, which costs about \$600 or so, QuarkXPress is about half that, coming in at less than \$400 for a basic version and about \$1,000 for a commercial version. This price is set to decrease with version 12. Users can save as many pages as needed without paying an additional cost. Version 11, however, only allows you to save to the number of pages you have available. QuarkXPress comes in many different forms, ranging

How to paint with Photoshop Before we start, you'll need Photoshop, a canvas size of at least 1000px by 1000px, and to have an Adobe Creative Cloud account. Create a new document in the size you want Start Photoshop and choose File > New. You will see a blank canvas. To prevent the background from appearing, click on Color and choose Greyscale, if you like a background. Go to the menu and click on Layer > New > Layer. Go to Layer > New > Layer and set the width to 600px. Now click on Layer > New > Layer. Go to Layer > New > Solid Color. Choose a bright colour such as white, magenta or light blue. Close your Solid Color layer. Copy your layer and paste in the new image. Select the Brush

To prevent the background from appearing, click on Color and choose Greyscale, if you like a background. Now click on Layer > New > Layer. Step 2. Create a new layer Choose the Brush tool. In the Brushes panel, select Color set to white and Size (or point size) to 150px. Step 3. Paint on the new layer Draw in the position you want. Don't worry about the background image, but if you want to use an image for your background, use the Rectangular Marquee tool to crop it out. Step 4. Pick up the brush Set the brush size to 1px for most smooth strokes. This will help you create a smooth blurred painting. Step 5. Draw with the Brush To create a blurry background, draw a few strokes without leaving the brush. Then, while holding down CTRL (on a Mac), click and drag with the mouse. This will blur the strokes. Step 6. Add a noise effect Click on Noise and desaturate it. Add a subtle blur on this layer. Step 7 388ed7b0c7
